DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Laustsen, U.S. Patent 5,437,774.

The Laustsen patent discloses the claimed method for separation and purification of a cationic protein using an electrodialysis apparatus having the same relative arrangement of membranes and chambers (figure 2) and the method of feeding the feed and obtaining the purified protein as claimed based upon the selection of the membranes (see col. 8, lines 50-65 and col. 7, lines 30-62). The reference further discloses the same relative current density (see col. 7, lines 50-55). The use of the anion membrane to separate the loading compartment would read upon the limitations of 4 and 8 (see col. 7, lines 30-50).

Therefore, the claims are rejected.

Allowable Subject Matter

Claims 2, 5-7, 9-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of record fairly disclose or render obvious the claimed method of purifying lactoferrin by electrodialysis as claimed or the use of a cation exchange membrane having an anion exchange membrane coated on the raw material loading compartment side of said cation exchange membrane.
